PROFESSIONAL PROFILE

Marketing professional with a Business degree majoring in Marketing and hands-on commercial experience in retail sell-in and campaign delivery. What sets me apart is a self-taught technical skill set: I've independently learned to build software and shipped four production systems for a national publisher, including the platform its marketing team uses every day. That combination means I understand the commercial objective behind a campaign and how to execute, measure and improve it, and I pick up new tools and platforms quickly, the same way I taught myself full-stack development from a standing start.

PROFESSIONAL EXPERIENCE

AI Web Developer

Scholastic Australia · Sep 2025 – Present

- Partner directly with Scholastic's marketing team to build and maintain the platform they use every day to design and publish campaign pages across Australia and New Zealand.
- Built AI-assisted content generation into that platform, so marketing staff can draft a page or section from a plain-English brief, with brand rules enforced automatically.
- Built a live sales and retail-performance dashboard that replaced manual monthly reporting, giving the business real-time visibility into what's selling and where.
- Automated a monthly retail submission process that used to take the team the better part of two weeks, cutting it down to about a minute once files are uploaded.

Business Process Developer

Scholastic Australia · Jul 2025 – Sep 2025

- Independently researched AU and NZ regulatory requirements to design a purchasing-compliance process now used by both the Australian and New Zealand teams.

Sales Support Coordinator

Scholastic Australia · Jan 2025 – Jul 2025 · Placement

- Started out at Scholastic working in the warehouse, which led to this sales support internship.
- Prepared monthly product submissions of 100 to 200 titles for major retailers including Amazon, Myer, Big W, and Dymocks.
- Gained hands-on marketing and commercial experience, learning how customer needs and trade relationships drive a publishing business.
- Conceived and delivered a fan-engagement Kahoot campaign for the launch of Sunrise on the Reaping (Hunger Games), run at retailers' midnight release events.
- Collaborated across Sales, Marketing, Finance, Purchasing, and Warehouse teams.

MARKETING & BUSINESS IMPACT

Campaign Page Platform: Built and still run the platform Scholastic's marketing team uses to design, publish and manage campaign pages across two countries, with AI-assisted content generation built in.

Sales & Retail Performance Dashboard: Automated a two-week manual retail process into a one-minute task, and built the live dashboard the business now uses to track performance by retailer.

Toy Safety Compliance Tool: Built a commercial decision-support tool that screens products against government safety data before a purchasing decision is made.

Travel Booking & Charge Tool: Built an end-to-end booking and expense system used by field teams across five states.

CORE STRENGTHS

I bring a genuinely unusual mix: commercial and marketing thinking paired with the ability to build the tools myself. I take ownership of problems and drive them to completion, and I work best in environments that reward initiative and quick learning.

Working across many departments has sharpened how I collaborate and communicate. My background in team sports has shaped my resilience, teamwork, and leadership, and I bring that energy to every group I join.
