KEY SKILLS

Development

Next.js, React, TypeScript, PostgreSQL, Prisma, REST APIs, custom authentication

AI & Automation

Claude API integration, AI-assisted development, n8n, prompt engineering

Security & DevOps

CodeQL / Dependabot, GitHub Actions CI/CD, PM2, IIS, Git

Data & Business

ETL pipelines, data reconciliation, process design, advanced Excel

Marketing & Commercial

Campaign contribution, brand-aligned content, customer & trade insight

EDUCATION

Bachelor of Business

Innovation & Entrepreneurship, Marketing major
University of Newcastle

SOFT SKILLS

- Rapid learning & adaptability
- Creative problem solving
- Initiative & ownership
- Cross-team collaboration

PROFESSIONAL PROFILE

Full-stack developer with a marketing background and a talent for turning manual, error-prone processes into production software. A business graduate who moved into development by understanding how work flows through a team, then building the tools to automate it. Designs and ships full-stack web applications (Next.js, React, TypeScript, PostgreSQL) used across Scholastic Australia's AU and NZ operations, owning each system from schema to deployment, and pairs hands-on engineering with real marketing and commercial experience.

PROFESSIONAL EXPERIENCE

AI Web Developer

Scholastic Australia · Sep 2025 – Present

- Design and build full-stack web applications that replace manual business processes, used across Scholastic's AU and NZ operations.
- Built four production systems from database schema through APIs, authentication, frontend, and deployment.
- Automated a monthly retail submission process that once took a team two weeks; the tool now generates 13 retailer reports, each in its own format, in about a minute and feeds a live sales dashboard.
- Worked closely with the marketing team to build a custom CMS and page builder, using my own marketing background to fit how marketers actually work.
- Led security remediation across production apps, closing a serious vulnerability that exposed internal sales data, and built a deployment pipeline designed to fail safely.

Business Process Developer

Scholastic Australia · Jul 2025 – Sep 2025

- Independently researched AU and NZ regulatory requirements to design a purchasing-compliance process now used by both the Australian and New Zealand teams.

Sales Support Coordinator

Scholastic Australia · Jan 2025 – Jul 2025 · Placement

- Started out at Scholastic working in the warehouse, which led to this sales support placement and into the internship that followed.
- Prepared monthly product submissions of 100 to 200 titles for major retailers including Amazon, Myer, Big W, and Dymocks.
- Gained hands-on marketing and commercial experience, learning how customer needs and trade relationships drive a publishing business.
- Conceived and delivered a fan-engagement Kahoot campaign for the launch of Sunrise on the Reaping (Hunger Games), run at retailers' midnight release events.
- Collaborated across Sales, Marketing, Finance, Purchasing, and Warehouse teams.

KEY SYSTEMS BUILT

CMS & AI Page Builder: Custom CMS replacing a commercial platform across AU and NZ, with a no-code visual builder and AI-assisted page generation.

Retail Submission & Sales Analytics: Generates 13 retailer reports in about a minute and reconciles sales data into a live dashboard.

Toy Safety Compliance Checker: Screens products against government safety datasets using a rules engine, for the AU and NZ markets.

Travel Booking & Charge Tool: Manages driver accommodation bookings across five states, generating emails, PDFs, and finance coding.

CORE STRENGTHS

I bring an uncommon mix of technical ability and business insight. I take ownership of problems and drive them to completion, and work best in environments that reward initiative, quick learning, and creative problem solving.

Working across many departments has sharpened how I collaborate and communicate. My background in team sports has shaped my resilience, teamwork, and leadership, and I bring that energy to every group I join.
